

Univee® 2-ADG *and* ADGF multilayer bag filters

Applications

Univee 2 filters are suitable for a wide range of general H V A C air conditioning applications such as offices, shopping centres, hotels, public buildings hospitals pharmaceutical factories and other industries that require clean conditions.

The filters are self- supporting particularly suitable for variable air volume systems.

No Pre-Filter Required

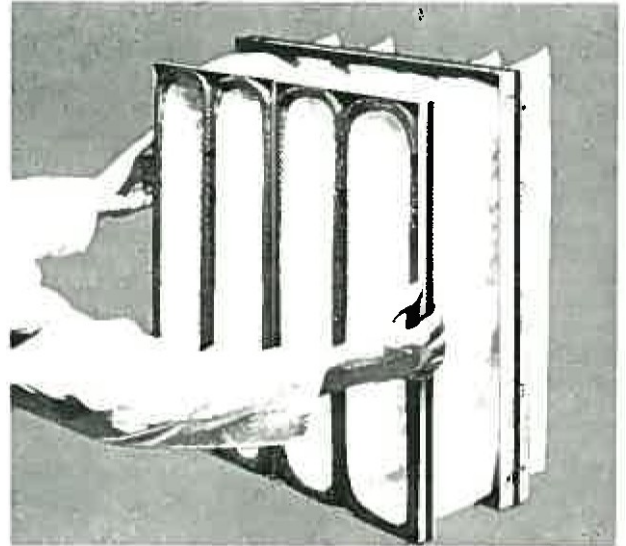

The Univee 2 bags are manufactured from synthetic fibre, blended to provide two stages of filtration with a high dust holding capacity on large particles. The combination of 'first' and 'second' stage filtration eliminates a requirement for a pre-filter arrangement.

FRONT AND SIDE WITHDRAW

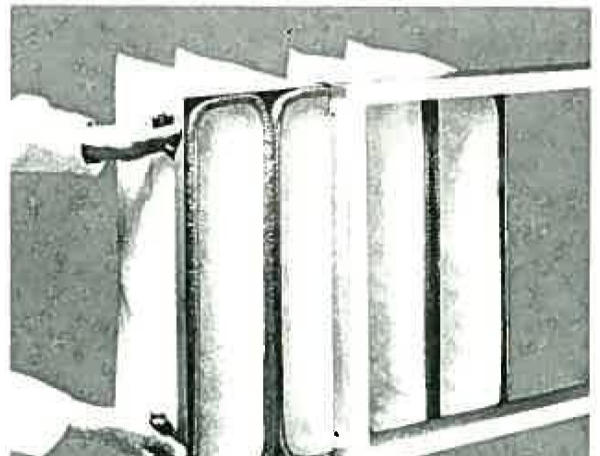

To provide flexibility and space utilisation the Univee 2 is available in a side withdraw arrangement.

SIMPLE BAG REPLACEMENT

The Univee 2 bags are bonded to a 'header' frame which in turn is installed within the outer holding frame fixture. Removal and replacement of the bag 'modules' is therefore simple and speedy and does not require any direct handling of the bag media itself. In consequence servicing procedures of the Univee 2 are both 'simpler and cleaner' than other filter types.

2-ADG *Front filter media withdraw type*

2-ADGF *Side filter media withdraw type*
